We are a well-established product company, and your role will be to ensure we are still at the very top of our software categories. Join us to create value with every technology investment!

The Position

You

- A fearless and dynamic engineer on an upward path:
- You have ambitious career goals and are looking for a company and team where these goals will be fulfilled.
- You are not afraid to take risks.
- You are computer science literate and can demonstrate competency in the qualifications you put on your resume.
- You can quickly figure out how things work.
- You can read code and learn from it; you can write code so others can learn from it.
- You can quickly integrate into a team and start contributing.
- You are comfortable working in multiple code bases and languages.

Us

We are a growing and fast moving team of engineers helping our customers understand and optimize their IT costs. Our work spans the whole stack: we ingest and analyze massive data sets, scan billing and usage patterns for insights, automate these insights and present data to our customers in an intuitive UI. We follow the DevOps model.

What we want you to do?

- You will work with a talented team to deliver a market leading IT Business Management product.
- You will be a part of a team that has end to end ownership of the entire product, from design, development, deployment to operations and interacting with customers.
- You will collaborate with other teams in Apptio to integrate our product within the overall Apptio ecosystem.

Basic Qualification

- 4-7 years of proven experience developing enterprise level software, testing and supporting software applications.
- Proficiency with Java is essential.
- Proficient with REST APIs
- Demonstrable computer science literacy: algorithms, data structures
- Experience with relational databases, schema design, SQL
- Proven application development skills with web or enterprise scale software.
- Strong knowledge of data structures, algorithms, object oriented programming.
- Excellent communication skills, collaboration across teams and critical thinking.
- Bachelor's degree in Computer Science or equivalent experience.

Preferred Qualification

One or more of the following areas

- Work experience with system design, software defined infrastructure, microservices.
- Experience with AWS and/or other public cloud technologies.
- Experience with JavaScript and one or more modern JavaScript UI frameworks (e.g. React, Angular).
- Database implementations (query optimization, index generation, caching) or NoSQL DBs a plus
- Experience with distributed source control systems such as Git and Mercurial.
- Experience with test driven development and frameworks (e.g. JUnit).
- Experience working in a DevOps model.

- Work-life balance – we understand and support the importance of striking a healthy balance between your work and personal life
- Amazing office at Bagmane Capital Business Park - Luxor Building.
